

Monofilament Recycling Bin Assembly

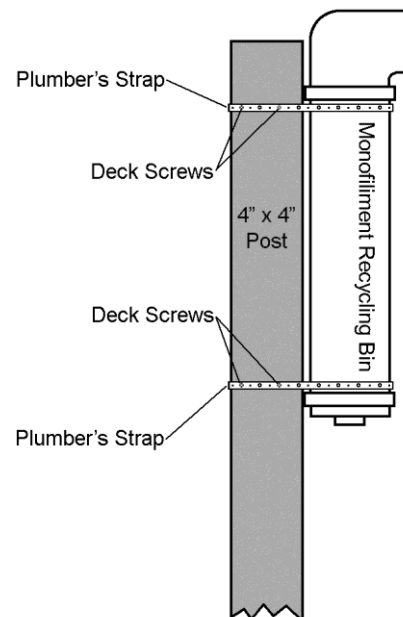

Mounting the Bin to a Post:

Secure the Bin to a 4x4 post with the hood opening at eye level using 2 - large Zip Ties or plumber strapping. (Available at most hardware stores) Place one strap directly under the lip of the upper shoulder and one just above the lower shoulder. The plumbers strap is best secured with galvanized deck screws so they won't rust. (See illustration below)

Leave enough room between the bottom of the bin and the ground to remove the screw cap and pull out the fishing line. There may be hooks or other sharp things in the bin. It is recommended the hood opening be approximately four feet above the ground or at eye level. Remember the public is using the Bin. Please use gloves to protect yourself.

Suggested items for collecting line from containers:

- Grocery store bags (to collect line)
- Nail clippers or small pair of scissors (to remove hooks, etc)
- Large pair of pliers or large wrench (in case screw cap is too tight)
- Gloves
- Short stick with cup hook on the end (used to reach inside the Bin and pull out line without having to put your hand inside)
- Spray bottle with 10% bleach (for rinsing inside Bins)

Mail collected and cleaned (remove vegetation, lead, hooks, debris etc.) monofilament only to:

Pure Fishing Inc., 1900 18th Street, Spirit lake, IA 51360-104

- Be sure to check with area manager or landowner for permission to install Bins.
- A Volunteer Agreement must accompany Bin orders. Available at: <http://www.mostreamteam.org/Documents/STActivities/mrrpagreement.pdf>
- Bins are shipped fully assembled
- 4x4 posts, plumber strap or Zip Ties and deck screws are **not** included.
